

NIVESHAAY

Task Assignment Document

Assigned To	Akshat Bhutra
Assigned By	Arjun, Niveshaay
Date Issued	25 September 2026
Deadline	30 September 2026, 6:00 PM IST
Project	Automated Financial Results Processing Pipeline (n8n)

1. Background & Context

Niveshaay receives corporate financial result links (PDFs) from NSE/BSE via an API. The current workflow uses **n8n** to process these links and send a formatted image (like the iValue Infosolutions Limited P&L example below) to a WhatsApp group using **Evolution API**. The financial data in the PDF is processed using an AI model with a specific prompt to extract and calculate P&L numbers into a standardized JSON format.

The goal of this task is to build a working end-to-end prototype, **built entirely in n8n**, that accepts a company name and a corporate result PDF link via an n8n form, processes the PDF through the AI prompt, generates the structured JSON, and delivers the formatted P&L result to WhatsApp.

Sample Output Reference (iValue Infosolutions Limited):

iValue Infosolutions Limited								
Rs in Cr	Q4 FY26	Q3 FY26	Change (in %)	Q4 FY25	Change (in %)	FY26	FY25	Change (in %)
Revenue	272.6	225.67	20.80%	260.6	4.60%	1055.56	922.68	14.40%
Expenses								
Purchases of Stock-in-trade	168.81	171.09	-1.33%	178.22	-5.28%	783.15	665.28	17.72%
Changes in inventories of Stock-in-trade	9.77	-4.37	323.57%	-3.1	415.16%	6.04	14.23	-57.55%
Gross Profit	94.02	58.95	59.49%	85.48	9.99%	266.37	243.17	9.54%
Gross Profit Margin	34.49%	26.12%		32.80%		25.23%	26.35%	
Employee Benefit Expense	19.58	18.72	4.59%	19.06	2.73%	73.89	68.8	7.40%
Other expenses	19.98	11.57	72.69%	20.34	-1.77%	58.18	60.23	-3.40%
Total Expenses	218.14	197.01	10.73%	214.52	1.69%	921.26	808.54	13.94%
EBITDA	54.46	28.66	90.02%	46.08	18.19%	134.3	114.14	17.66%
EBITDA Margin	19.98%	12.70%		17.68%		12.72%	12.37%	
Depreciation	1.72	1.72	0.00%	1.79	-3.91%	6.95	7.16	-2.93%
Finance Cost	3.07	2.4	27.92%	4.4	-30.23%	11.25	13.46	-16.42%
Profit before Exceptional Items, Other Income	49.67	24.54	102.40%	39.89	24.52%	116.1	93.52	24.14%
Other Income	6.05	2.01	201.00%	10.56	-42.71%	19.42	19.67	-1.27%
Exceptional items	-0.5	5.69	108.79%	0		5.19	0	
Profit Before Tax	56.22	20.86	169.51%	50.45	11.44%	130.33	113.19	15.14%
Tax Expenses	13.57	5.2	160.96%	12.47	8.82%	31.95	27.89	14.56%
PAT	42.65	15.66	172.35%	37.98	12.30%	98.38	85.3	15.33%
PAT Margin	15.65%	6.94%		14.57%		9.32%	9.25%	
EPS (Basic)	7.85	2.86	174.48%	7.13	10.10%	18.06	15.51	16.44%

Sample NSE/BSE Corporate Result Link:

<https://www.bseindia.com/xml-data/corpfilings/AttachLive/example-result.pdf>

(This is a sample format. The user will paste actual BSE/NSE PDF links into the form.)

2. Scope of Work

Important: The entire solution must be built in n8n only. No external frontend or backend is allowed: no HTML/React/other frameworks, no custom web pages served through an HTML or webhook node, and no separate backend services. The form, processing, AI call and WhatsApp delivery must all happen inside n8n.

2.1 Input Form (n8n Form)

- Build the input form using n8n's built-in form functionality (e.g. the **n8n Form Trigger** node).
- The form must have two fields: **Company Name** and **Result PDF URL** (BSE/NSE link).
- Submitting the form must trigger the processing workflow directly in n8n.
- The form should show a clear confirmation or error message to the user after submission (e.g. invalid link, processing failed).

2.2 PDF Processing Pipeline

- Accept the company name and PDF link from the form submission.
- Download / fetch the PDF content from the provided link.
- Send the PDF to the AI model along with the prompt in Section 3.
- Parse the AI response and produce the standardized JSON output.

2.3 AI Prompt & JSON Output

Use the prompt provided in Section 3 below with an AI model of your choice (Gemini, Claude, or any other capable model). The prompt instructs the AI to extract consolidated P&L data from the PDF and return a strictly formatted JSON with quarterly financial figures, calculated margins, EBITDA, PAT, EPS, etc.

2.4 WhatsApp Delivery

- Convert the structured JSON into a formatted P&L result (an image similar to the iValue Infosolutions sample above).
- Send the formatted result to WhatsApp using **Evolution API**, from within the n8n workflow.

3. AI Prompt (Complete)

Below is the exact prompt to be sent to the AI model along with the PDF content. Copy and use as-is:

PROMPT START

You are a financial data processor that converts quarterly P&L statements into standardized JSON format. You are only to look at the consolidated financial results.

The table can be under any form including but not limited 'FINANCIAL RESULTS FOR THE QUARTER / YEAR ENDED', 'STATEMENT OF AUDITED/UNAUDITED CONSOLIDATED FINANCIAL RESULTS FOR THE HALF YEAR ENDED AND YEAR ENDED MARCH', 'CONSOLIDATED FINANCIAL RESULTS FOR THE QUARTER', 'Profit and Loss statement', 'PnL', 'Statement of Audited Financial Results for the Half Year & Year ended' and so on.

Critical: Look and process the standalone statement only and only if consolidated statement is not present.

Important: If you don't find the profit and loss statement in the document just output no pnl found and nothing else.

1. DATA EXTRACTION RULES

Company Name Extraction

1. ****Identify:**** Look for legal entity markers ("Limited", "Ltd", "Pvt", "Inc").
2. ****Formatting:****

```

* Use Title Case for names (e.g., "Tata Motors").
* Keep acronyms ALL CAPS (e.g., "ITC Limited", "H.G. Infra").
* If no name is found, output: "Unknown Company"

## OUTPUT FORMAT (STRICT)
Return ONLY valid JSON with no explanations.

### CRITICAL: Column count depends on the quarter type:

**For Q1 and Q3** - output 4 columns per row (Particulars + 3 data columns):
{
  "company_name": "Tata Motors",
  "quarter_type": "standard",
  "row1": ["Particulars", "Q1 FY26", "Q4 FY25", "Q1 FY25"],
  "row2": ["Revenue", "3611.02", "3347.70", "4132.67"],
  ...
}

**For Q2** - output 6 columns per row (Particulars + 5 data columns, adding H1 of
current and previous year):
{
  "company_name": "Tata Motors",
  "quarter_type": "extended",
  "row1": ["Particulars", "Q2 FY26", "Q1 FY26", "Q2 FY25", "H1 FY26", "H1 FY25"],
  "row2": ["Revenue", "450.50", "425.30", "380.20", "875.80", "740.50"],
  ...
}

**For Q4** - output 6 columns per row (Particulars + 5 data columns, adding full year
current and previous year):
{
  "company_name": "Tata Motors",
  "quarter_type": "extended",
  "row1": ["Particulars", "Q4 FY26", "Q3 FY26", "Q4 FY25", "FY26", "FY25"],
  "row2": ["Revenue", "450.50", "425.30", "380.20", "1800.00", "1650.00"],
  ...
}

## TABLE STRUCTURE

### Column Headers
- Column 1: "Particulars"
- Column 2: Most recent quarter
- Column 3: Previous consecutive quarter
- Column 4: Same quarter from previous year
- Column 5 (Q2/Q4 only): H1 current year (Q2) OR Full Year current (Q4)
- Column 6 (Q2/Q4 only): H1 previous year (Q2) OR Full Year previous (Q4)

### Quarter Naming Convention
- 30-Jun-25 -> Q1 FY26
- 30-Sep-25 -> Q2 FY26
- 31-Dec-25 -> Q3 FY26
- 31-Mar-26 -> Q4 FY26

### Row Order (Standard P&L)
1. Revenue
2. Expenses (leave values blank - heading only)
3. [Expense line items - varies by company]
4. Gross Profit*
5. Gross Profit Margin*
6. Employee Benefit Expense
7. [Other operating expenses - varies]
8. Other expenses
9. Total Expenses*
10. EBITDA*

```

```

11. EBITDA Margin*
12. Depreciation
13. Finance Cost
14. Profit before Exceptional Items, Other Income*
15. Other Income
16. [Exceptional items - if present]
17. [Share of profit/loss in JV/Associate - if present]
18. Profit/Loss Before Tax*
19. Tax Expenses
20. PAT*
21. PAT Margin*
22. EPS (Basic)

```

*Calculated if missing

You are required to look at the given data and intelligently add or remove fields.

Note:

1. Service charges/Service Cost are not included in the gross profit calculation.
2. Revenue is revenue from operations and not total revenue.
3. If excise duty is present then there will be a net revenue = revenue - excise duty.
4. Make sure that the values you pick and output are of the correct quarters.

CALCULATION FORMULAS

```

**Gross Profit** = Revenue - COGS-type expenses
**Gross Profit Margin** = (Gross Profit / Revenue) x 100
**Total Expenses** = Sum of all expense line items (excluding Depreciation and Finance Cost)
**EBITDA** = Revenue - Total Operating Expenses (excluding Depreciation, Finance Cost and other income)
**EBITDA Margin** = (EBITDA / Revenue) x 100
**Profit before Exceptional Items, Other Income** = EBITDA - Depreciation - Finance Cost
**Profit Before Tax** = EBITDA - Depreciation - Finance Cost + Other Income +/- Exceptional items +/- Share of profit/loss in JV
**PAT** = Profit Before Tax - Tax Expenses
**PAT Margin** = (PAT / Revenue) x 100
**EPS (Basic)** = Use provided value only; do not calculate

```

For Q2 and Q4, apply the same calculation formulas to the H1/FY columns.

DATA PROCESSING RULES

- Convert ALL values to Rs Crores
- Round to 2 decimal places
- Treat "-" or null as 0 (except for EPS)
- Add "%" suffix to all margin calculations
- All numeric values must be strings in JSON
- Verify all calculations before final output

PROMPT END

4. AI Model & API Key

No API key is provided for this task. You must use **your own API key** for the AI model of your choice (Gemini, Claude, or any other). Store it using n8n's credentials, not hard-coded inside nodes.

! Do not share your API key publicly or include it in the exported workflow / public repo.

5. Resources Summary

Resource	Details
Platform	n8n only (form, processing, AI call, WhatsApp delivery)

AI Model / API Key	Your own key; model of your choice (Gemini / Claude / other)
AI Prompt	Full prompt included in Section 3 above
Sample Output Image	iValue Infosolutions Limited P&L image embedded in Section 1
Sample Link Format	BSE/NSE PDF link example shown in Section 1
WhatsApp Delivery	Evolution API

6. Deliverables

Must submit the following by **30 September 2026, 6:00 PM IST**:

1. **Working n8n Workflow:** An n8n form that accepts a company name and a BSE/NSE PDF link, processes it via the AI model, and sends the formatted P&L result to WhatsApp.
2. **Output Samples:** At least 2-3 sample JSON outputs generated from real BSE/NSE corporate result PDFs, along with screenshots of the corresponding WhatsApp messages.
3. **Workflow Export:** The n8n workflow exported as JSON (with credentials removed), shared via GitHub repo or ZIP file.
4. **Brief Documentation:** A short README explaining how to import the workflow, set up credentials, and run it.

7. Evaluation Criteria

Criteria	What We Look For
Correctness of JSON Output	Numbers match the source PDF; calculations (margins, EBITDA, etc.) are accurate
End-to-End Functionality	Form submission triggers processing and the result reaches WhatsApp seamlessly
n8n-Only Implementation	Entire solution built within n8n, with no external frontend or backend
Workflow Quality	Clean, readable workflow with sensible node structure and naming
Error Handling	Graceful handling of invalid links, missing P&L data, AI/API errors
Documentation	Clear setup instructions; easy for reviewer to import and run

8. Timeline

Date	Milestone	Notes
25 September 2026	Task Issued	Document + prompt shared
30 September 2026	Submission Deadline	6:00 PM IST: submit workflow export, samples + README

9. Important Notes

- You may use **only n8n** for the task. The form, processing and WhatsApp delivery must all be built in n8n.
- Use your own AI API key (Gemini, Claude, or any other model). No key is provided by Niveshaay.
- The JSON output must strictly follow the format specified in the prompt.
- Test with multiple corporate result PDFs from NSE/BSE to ensure robustness across different companies and quarter types (Q1-Q4).

Best regards,
Arjun
Niveshaay
